  - (b) The term "dairy spread derivatives" means emulsifiers of hydro-oil spreadable kind, including the unique milk fat in the product with the percent of 39% or more without exceeding 80% by weight.
- 3- The products obtained by concentrating whey with addition of milk or milk fat materials are classified as cheeses in the heading 04.06, provided that there are the following three characteristics:
  - (a) Their covered milkfat content is (5%) or more calculated by weight on the dry matter.
  - (b) The dry matter percent calculated by weight is neither less than (70%) nor more than (85%).
  - (c) They should be molded or moldable.
- 4- This chapter does not cover the following:

**Notes:**

**1- This chapter does not cover:**

- (a) Roasted malt put up as coffee substitutes (heading 09.01 or 21.01).
- (b) Prepared flours, groats (crushed grains), meals and starches of heading (19.01).

**2- (a) Products from the milling of cereals shown in the below-mentioned table are covered in this chapter if the following two percentages were available in them calculated by weight on the dried material:**

- 1- Starch content exceeding that identified in column (2) of the table (according to Ewers polarimetric method).
- 2- Dust (ash) content (after deduction of any added materials) not exceeding that identified in column (3).

Otherwise, they fall in heading (23.02), however, germ of cereals, whole, rolled, flaked or ground, is always classified in heading (11.04).

(b) Products falling in this chapter under the above-mentioned provisions are covered in heading (11.01) or (11.02) if the percentage passing through a woven metal wire cloth sieve (riddle) with aperture indicated in columns (4) and (5) below according to the case, are not less by weight than the percentage shown before each species of concerned grains.

But those products where this condition is unavailable are covered in tem (11.03) or (11.04)

Grains (cereals) (1)	Starch Content (2)	Dust (ash) Content (3)	Percent of passing through a sieve with aperture measurement	
			315 micrometers (microns) (4)	500 micrometers (microns) (5)
Wheat and rye.....	45%	2.5%	80%	--
Barley.....	45%	3%	80%	--
Oats.....	45%	5%	80%	--
Corn and sorghum grains.....	45%	2%	--	90%

**3- For application of the provisions of heading (11.03), the term (groats (crushed grain)) and (meals) means the products obtained by fragmentizing the cereal grains , provided that the following pertinent condition should be available:**

- (a) If they were of the products of corn, the percentage of 95% at least by weight should pass through a sieve of woven metal with aperture measuring 2 mm.
- (b) If they were of other products of grains, the percentage of 95% at least of their weight should pass through a sieve of woven metal with aperture measuring 1.25 mm.

**PREPARED FOOD STUFFS: BEVERAGES, SPIRITS & VINEGAR: TOBACCO & MANUFACTURED TOBACCO SUBSTITUTES**

**Chapter 16**

**Preparations of Meat, Fish, Crustaceans, Molluscs or Other Aquatic Invertebrates**

**Notes:**

- 1- This chapter does not cover the meat, meat offal, fish, crustaceans, molluscs and other aquatic invertebrates prepared and preserved by the processes specified in chapters 2 or 3 or in heading 05.04.
- 2- Food preparations fall in this chapter provided that they contain more than 5% by weight of sausage (thick or thin), meat, offal, blood, fish, crustaceans, molluscs, other aquatic invertebrates, or any group thereof. If these food preparations contain two or more of the above-mentioned species, they will be classified in the heading of chapter 16 corresponding to the predominant component (s) by weight. These provisions are neither applied to the stuffed products of heading 19.02 nor to the preparation of heading 21.03 or 21.04.

**Sub-heading Notes:**

- 1- For the purposes of sub-heading 16 02 10, the term "homogenized preparations" means the preparations of meat, meat offal or blood, that have accurate homogeneity and are prepared for retail sale as infant food or for the purposes of diet (regimen), in containers that maximum contain the weight of 250 g, and to apply this definition, no account is to be taken of insignificant quantities of other elements that have been added to the preparation for spicing (seasoning), preservation, or other purposes. These preparations may contain small quantity of visible pieces of meat, meat offal, and this sub-heading 16 02 10 takes precedence over all other sub-headings of heading 16.02.
- 2- The fish and crustaceans specified by their common nominations only in sub-headings of heading 16.04 or 16.05 belong to the same species mentioned in chapter 3 under the same name.

**Chapter 27**  
**Mineral Fuels, Mineral Oils and Their Distillation Products, Bituminous Substances and Mineral Waxes**

**Notes:**

**1- This chapter does not cover:**

- (a) separate chemically defined organic compounds, other than pure methane and propane which are classified in heading 27.11.
- (b) Medicaments of headings 30.03 or 30.04.
- (c) Mixed unsaturated hydrocarbons of headings 33.01, 33.02 or 33.05.

**2- References in heading 27.10 to "petroleum oils or bituminous mineral materials oils" does not only cover petroleum oils or bituminous mineral materials oils, but it also covers the similar oils and those which are essentially composed of unsaturated mixed hydrocarbons, obtained by any method, provided that the weight of non-aromatic elements exceeds the weight of aromatic elements therein. However, such term does not cover the liquefied synthetic poly-fibril where less than 60% of its volume is distilled at 300 degree centigrade transformed to 1.013 millibar through using a low pressure distillation method (chapter 39).**

**3- For the purposes of heading 27.10, the term "oils remainders" means the remains which essentially contain petroleum oils and the oils obtained of bituminous minerals (as indicated in note "2" of this chapter), whether or not mixed with water, and they cover the following:**

- (a) Oils that are unfit for use as raw materials (such as oils used for lubrication, oils used for hydraulic purposes and oils used for transformers).

(b) Oils of petroleum oils storage tanks sediments essentially containing these oils and the high concentration of additives (such as chemical materials) used for initial products manufacturing.

(c) Oils at the form of emulsifiers in water or mixed with water as a result of oils spilling, washing storage tanks or utilization of suspension oils for mechanical operations.

**Sub-heading Notes:**

1- For the purposes of sub-heading 27 01 11, the term "anthracite" means the coal where the percentage of volatile materials does not exceed 14% (calculated on the dry product without mineral materials).

2- For the purposes of headings 27 01 12, the term "bituminous coal" means the coal where the percentage of volatile materials exceeds 14% calculated on the dry product without mineral materials and which the limit of its heating power limit equals or exceeds 5,833 kilo calorie per kilogram (calculated on the wet product without mineral materials).

3- For the purposes of sub-headings 27 07 10, 27 07 20, 27 07 30, 27 07 40 and 27 07 60, the term "benzol", "tolul", "xylol", "naphthol" and "phenol" applies to the products containing more than 50% by weight of benzene, toluene, xylene, naphthalene or phenylene, consecutively.

4- For the purposes of sub-heading 271011 "the light oils and preparations" are those where 90% or more of their volume (including the waste) is distilled at 210 degree centigrade (method of ASTM D86).

**Section VI**  
**Products of Chemical Industries or Allied Industries**

**Notes:**

- 1- (a) Goods (other than radioactive ores), where the properties (specifications) of headings 28.44 or 28.45 are available therein, should be classified in these two headings, and should not be covered in another heading of customs tariff Table.  
(b) Subject to and taking into consideration the provisions of the above-mentioned paragraph (a), all the products where the properties (specifications) of headings 28.43 or 28.46 are available therein, should be classified in one of these two headings, and should not be classified in another heading of this section.
  
- 2- Subject to and taking into consideration the provisions of the above-mentioned note (1), the commodities that can be classified in headings 30.04, 30.05, 30.06, 32.12, 33.03, 33.04, 33.05, 33.06, 33.07, 35.06, 37.07 or 38.08 because of their accommodation in standard quantities or for retail sale, should be classified in these headings and should not be classified in another heading of customs tariff Table.
  
- 3- Goods put up in sets containing many separate elements that are completely or partially subordinated to this section and that are easily recognized as being prepared, after mixture, to form a product subordinated to sections six or seven – these products are covered in the heading referring to the later product, provided that its constituent elements:
  - (a) Can obviously be identified according to the quality of their accommodation as being prepared for utilization together without being packaged.
  - (b) Presented together.
  - (c) Identifiable concerning their nature or with regard to the quantities of each one of them as being mutually complementary to each other.

**Chapter 28**

**Inorganic Chemicals, Organic or Inorganic Compounds of Precious Metals, Rare Earth Metals, Radioactive Elements or Analogues (Isotopes)**

**Notes:**

- 1- Unless stated otherwise, these chapter headings cover the following:
  - (a) Separate chemical elements and the separate compounds with identified chemical properties, whether the covered stains (gangues, impurities).
  - (b) Products of the above-mentioned paragraph (a), dissolved in water.
  - (c) Products of the above-mentioned paragraph (a), solved in other solutions provided that such dissolution is an ordinary and necessary process for accommodating these products and that it was observed only for purposes related to security or transportation, provided that the solvent does not make these products valid for some specific uses other than for general use.
  - (d) Products of the above-mentioned paragraphs (a), (b) or (c) with adding a necessary stabilizer (fastener) thereto (including the anti-caking matter) for their preservation or transportation.
  - (e) Products of the above-mentioned paragraphs (a), (b), (c) or (d) with adding an anti-dusting agent thereto or a coloring material to facilitate their identification or for protective purposes provided that such additions do not make the product more appropriate for specific uses rather than for general use.
  
- 2- In addition to dithionates and sulfoxalates, fixated (fastened) by organic materials (heading 28.31), carbonates and super carbonates of inorganic bases (heading

28.36), cyanides and their oxides, complex cyanidates for inorganic bases (heading 28.37), fellemenates, cynates and thiocynates for inorganic bases (heading 28.38), the organic products of headings of 28.43 to 28.46 and carbides (heading 28.49), only the following carbon compounds are covered in this chapter:

- (a) Carbon oxides, hydrogen cyanides, felleminic acids, isocyanic, thiocyanic and other simple or complex cyanogenic acids (heading 28.11).
- (b) Halide oxides of carbon (heading 28.12).
- (c) Carbon di-sulphurates (heading 28.13).
- (d) Thiocarbonates, selinuocarbonates, tellurocarbonates, selinuocynates, tellurocynates, tetrathiocyanodiamino-chromate (rinks) and other cynates of inorganic bases, complex (heading 28.42).
- (e) Hydrogen peroxide (oxidized water) hardened (stiffened) by carbamide (urea) (heading 28.47), oxysulphuric carbon, thiocarbonyl halides, cyanogen and its halides and cyanamide and its mineral derivatives (heading 28.51), except for calcium cyanamide, whether it was pure (chapter 31).

3- Subject to the provisions of note (1), section six, this chapter does not cover:

- (a) Sodium chloride and magnesium oxide, whether or not pure, and other products of section five.
- (b) Organic – inorganic compound other than those of the above-mentioned note (2).
- (c) Products covered in notes (2), (3), (4) or (5) of chapter 31.
- (d) Inorganic products of used as luminophores of heading 32.06, glass frit and other glass at the shape of powder, granules or chips of heading 32.07.
- (e) Artificial graphite (heading 38.01), preparations for pack filling fire extinguishers or projectiles filled for fire extinction of heading 38.13, ink cleaners accommodated in packages for retail sale of heading 38.24 and cultivated crystals (other than optical elements), of alkaline or dusty alkaline metal halides where the unit weight is not less than 2.5 grams, of heading 38.24.
- (f) Natural, synthetic or regenerated precious or semi-precious stones (heading 71.02) to (heading 71.05) as well as precious metals and their mixtures of chapter 71.

6- Heading 28.44 applies only to:

- (a) Technetium (its atomic number is 43), Promethium (its atomic number is 61), polonium (its atomic number is 84) and all elements having an atomic number exceeding 84.

- (f) Radioactive residues, whether or not usable.

For the purposes of this note and headings 28.44 and 28.45, the statement of "analogues, isotopes" means the following:

- Individual nucleotides other than those existing at the nature in monoisotopic state.
- Mixtures of isotopes for the same elements rich in one or more of their isotopes, that is to say the elements which natural analogues (isotopic) structure has been artificially modified.

**Chapter 29**  
**Organic Chemicals**

**Notes:**

**1- Except where the context requires otherwise, these chapter headings apply only to:**

- (a) Separate chemically defined organic compounds, whether or not containing impurities**
  
- (b) The mixtures of two or more compounds which have the same atomic composition (isomers) of the same organic compound, (whether they covered stains (gangues, impurities)), except for mixtures of acyclic "non-ring" hydrocarbon isomers (other than stearic-isomers, whether or not saturated (chapter 27)).**
  
- (c) The products of headings 29.36 to 29.39, sugar ethers, acetyls, esters and their salts of heading 29.40 and products of heading 29.41, whether they have identified chemical properties or not.**
  
- (d) The products of the above-mentioned paragraphs (a), (b) or (c), which are dissolved in water (hydraulic solutions).**
  
- (e) The products of the above-mentioned paragraphs (a), (b) or (c), dissolved in other solvents, provided that such dissolution is an ordinary (usual) and necessary process for accommodating these products and that it was observed (followed) only for purposes related to security considerations or transport requirements and provided that the solvent does not make these products valid for some specific uses, other than for general purpose uses.**
  
- (f) The products of the above-mentioned paragraphs (a), (b), (c), (d) or (e), with adding a necessary stabilizer (fastener) thereto (including an anti-caking factor) for their preservation or transportation.**
  
- (g) The products of the above-mentioned paragraphs (a), (b), (c), (d), (e) or (f), with adding thereto an anti-dust material or a coloring material having a distinguishable smell in order to facilitate their identification or for safety purposes provided that such additions do not make the product appropriate for specific applications other than for general purpose uses.**
  
- (h) The following products with diluted criteria (according to standard concentration capacity), for producing azo dyes, diazonium salts and binary bonds used for duplication with these salts and amines which are transferable to di-azotic compounds and their salts.**

**2- This chapter does not cover:**

- (a) Goods of heading 15.04, or the crude glycerol of heading 15.20.**
- (b) Ethyl alcohol (heading 22.07 or heading 22.08).**
- (c) Methane and propane (heading 27.11).**
- (d) Carbon compounds of note 2 of chapter 28.**
- (e) Carbamide (urea) (heading 31.02 or 31.05).**
- (f) Coloring matter of vegetable or animal origin (heading 32.03), synthetic organic coloring matter and the synthetic organic products of illuminative articles or which are used as helping factors (adjuvants) for photo whitening (blanching) (heading 32.04), as well as dyes and other coloring materials accommodated (prepared) in forms or packages for retail sale (heading 32.12).**
- (g) Enzymes (heading 35.07).**
- (h) Metalloids, hexamethylenetetramine or similar substances put up in the form of tablets, sticks or similar forms for utilization as fuel, in addition to liquid fuel and liquefied gases of used for packing or refilling cigarette lighters and similar lighters, in containers which capacity not exceeding 300 cm<sup>3</sup> (heading 36.06).**
- (i) The products accommodated (prepared) as pack fillers for fire extinguishers or projectiles prepared for fire extinction covered in heading 38.13, ink removers accommodated (prepared) in packages for retail sale of heading 38.24.**
- (j) Optical elements, particularly those manufactured of ethylenediamine tartars.**

**3- Goods where two or more headings of this chapter are applied thereupon are covered in the heading that comes later in numerical (digital) ordering.**

**4- Each reference, in headings of 29.04 to 29.06, of 29.08 to 29.11 and of 29.13 to 29.20, to halogenated, sulphurated, nitrated or nitrosated derivatives also covers (i.e. the reference) the compound derivatives, such as sulphohalogenated, nitrohalogenated, nitrosulphurated or nitrosulphohalogenated derivatives.**

**Nitrato or nitroso groups should not be considered as nitrogenous functions according to the meaning present at heading 29.29. For the purposes of headings 29.11, 29.12, 29.14, 29.18 and 29.22, the term "oxygenous functions" only means the functions which are limited to (the groups with distinguished organic properties that contain oxygen) indicated at headings 29.05 to 29.20.**

**5- (a) Esters of organic compounds having (possessing) the acidic function classified in sub-chapters of (1 to 7) with organic compounds classified in these sub-chapters are**

classified with the compound where an heading thereof is covered in these sub-chapters and which comes later in numerical (digital) ordering.

(b) Esters of ethyl alcohol with organic compounds having the acidic function covered in sub-chapters (1 to 7) are classified with compounds having the analogous (corresponding) acidic function.

(c) Subject to note 1- section VI and note 2- chapter 28, it is obvious that:

1- Inorganic salts of organic compounds such as: compounds having acidic, phenolic, anionic function or organic bases, covered in sub-chapters (1 to 10) or in heading 29.42, are classified in the heading appropriate to their analogous (corresponding) organic compound.

2- Salts formed by interaction between organic compounds covered in sub-chapters (1 to 10) or in heading 29.42 are classified in the heading appropriate to the base or to the acid (including compounds having phenolic or anionic function) constructed thereof and comes later in numerical (digital) ordering in the chapter.

(d) Metallic alcoholates are classified in the same heading for itemizing their analogous (corresponding) alcohol, except in the case of ethanol (heading 29.05).

(e) Carboxylic acids halides are classified in the same heading of acids analogous (corresponding) thereto

6- Compounds of headings 29.30 and 29.31 are organic compounds which fractions contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other metalloid (non-metallic) elements or metallic elements (such as sulphur, arsenic, mercury or lead) directly bonded to carbon atoms.

Heading 29.30 (organic sulphur compounds) and heading 29.31 (other organic – inorganic compounds) do not cover the sulphurated or halogenated derivatives (including compound derivatives), which are – without regard to hydrogen, oxygen and nitrogen – had been directly bonded for atoms of sulphur or halogens to carbon that availed (endowed) them sulphurated or halogenated derivatives properties (derived or compound).

7- Headings 29.32, 29.33 and 29.34 do not include tri-cyclic epoxides, ketone peroxides, cyclic (ring) polymers of aldehydes, thio-aldehydes or anhydrides of carboxylic acids having multiplied bases or cyclic (ring) esters for multi-hydroxyl-alcohols or multi-base acids phenols and multi-base acids amides.

These provisions will only be applied when the location of heterogeneous (non homogenous) atoms in the cycle (ring) results exclusively of cyclic (ring) function or of the above-mentioned functions.

8- For the purposes of sub-heading 29.37:

(a) The (hormones) elements cover factors that are secreted (discharged), or that stimulate hormones, frustrations (inhibitors) of hormones and juices (extractions) of hormones.

(b) The expression (principally used only as hormones) applies to derivatives of hormones, synthetic analogues (isotopes) principally used for their hormone

effect as well as derivatives and synthetic analogues (isotopes) principally used as expedients (mediators) for constructing (synthesizing) products of this heading.

**Sub-heading Note:**

1- Within any heading of this chapter, derivatives of any chemical compound (or any group of chemical compounds) are classified at the same sub-heading where this compound (or this group of compounds) is classified, provided that they were not, on the one hand, covered in any other more specific heading and that they do not, on the other hand, exist in sequence of sub-headings related to any remaining sub-heading which contains categorization under nomenclature of "other", i.e., for other articles .

2- For the purposes of heading 34.01, the term "soap" does not apply except to the water-soluble-soap. Soap and other products of heading 34.01 may contain added materials (such as: antiseptics (disinfectants), abrasive powders, fillers or medicaments). The products containing abrasive powders remain classified in heading 34.01, only if in the form of bars, cakes or molded pieces. In other forms, they are to be classified in heading 34.05 as scouring powders and similar preparations.

3- For the purposes of heading 34.02, the expression "organic surface-active agents" means products which, when being mixed with water at concentration of 0.5% at 20°C and left for an hour at the same temperature:

- (a) Give transparent or translucent liquid or fixed emulsifier without separating the insoluble matter.
- (b) Reduce surface tension to  $4.5 \times 10^{-2}$  Newton per meter (N/m) (45 Dyne per centimeter (D/cm) or less.

4- The expression "petroleum oils and bituminous (asphalt) mineral oils", of heading 34.03, means products identified at note 2 of chapter 27.

5- Subject to the exclusions provided below, the expression "artificial waxes and prepared waxes" of heading 34.04 applies only to:

- (a) Organic products which have the qualification of chemically produced waxes whether or not water soluble.
- (b) Products obtained by mixing different waxes.

(c) Products of a waxy character, based on one or more articles of waxes, containing waxes, resins, minerals or other materials.

This heading does not cover the following:

- 1- Products of headings 15.16, 34.03 or 38.23, whether or not they have a waxy character.
- 2- Unmixed animal waxes or unmixed vegetable waxes, whether or not refined or colored, of heading 15.21.

## Chapter 38

### Miscellaneous Chemical Products

#### Notes:

#### 1- This chapter does not cover:

(a) Separate chemically defined elements or compounds, except for:

1- Artificial graphite (heading 38.01).

2- Insecticides, rodenticides, fungicides, herbicides, poisons for Rodentia, germination stoppers (germicides), regulators of plant growth, antiseptics (disinfectants) and similar products accommodated at the shapes or in the packages (covers) of heading 38.08.

3- The products accommodated as chargers for fire extinguishers or fire extinguishing ejectors (projectiles) (heading 38.13).

4- The certified reference materials identified in paragraph (2) hereunder.

5- The products mentioned at the paragraphs a and c of note 3 hereunder.

(b) Mixtures of chemical products and food materials or other materials having a food value, of used for preparing foods ready for human consumption (heading 21.06 in general).

(c) Dust and remains (including the mud (alluvium), other than sewerage silt (sludge), containing minerals, arsenic or their mixtures and satisfy the provisions of paragraphs (a) and (b) of note 3 at chapter 26 (heading 26.20).

(d) Medicaments (heading 30.03 or 30.04).

(e) The consumed catalyzes (chemical agents) of used in extracting ordinary minerals or manufacturing chemical compounds which are based on ordinary minerals (heading 26.20), the consumed catalyzes of principally used for retrieving precious minerals (heading 71.12) as well as the catalyzes composed of minerals of mineral mixtures (casts) at the shape of extremely fine powders or mineral textiles (section fourteen or fifteen).

2- (a) For the purpose of heading 38.22, the term "certified reference materials" means the reference materials accompanied by a certificate showing the values of certified (approved) properties, the methods applied for determining these values, degree of confidence particular to each value which is valid for the purposes of analysis, standardization or reference.

(b) Except for the products of chapter 28 or 29, and in order to itemize the certified reference materials, heading 38.22 has precedence over any other heading in the Table.

- 3- The following products are covered in heading 38.24 and are not covered in any other heading of custom tariffs Table headings:
- (a) The planted crystals (except for optical elements) of magnesium oxide or halides of alkali or dusty (earthy) alkali minerals where the unit weight thereof is not less than 2.5 grams.
  - (b) Oils of fusel and oils of duple.
  - (c) Ink removers accommodated in packages (covers) for retail sale.
  - (d) The compounds for writing correction on the copying paper and the other liquids for writing correction, accommodated in packages (covers) for retail sale.
  - (e) Articles of fusible pottery (ceramics) for examining ovens temperature (such as: Sager cones).
- 4- The term "municipal waste" – wherever of this Table – means the waste of collected of houses, hotels, restaurants, hospitals, shops, offices, etc..., sweepings of roads and pavements, offal (trash) of building and demolition. The municipal waste contains, in general, a wide genus of materials, e.g., plastics, rubber, wood, paper, textile, glass, minerals, food materials, broken furniture and other spoiled or insignificant , but the "municipal waste" do not cover the following:
- (a) The materials separated of the junk, e.g., the rubbish of plastics, rubber, wood, paper, textile, glass, minerals and consumed batteries which subordinate their specific headings at the Table.
  - (b) The industrial waste.
  - (c) The waste of pharmaceutical preparations which definition was of note 4 (k) of chapter 30.
  - (d) The medical waste which definition is of paragraph (a) of note 6 hereunder.
- 5- For the purposes of heading 38.25, the term "sewerage silt (sludge)" means the mud (alluvium) resulting of wastewater treatment plants of cities and these pre-treatment waste cover the remainders f cleaning and the unstable sludge. The stable sludge is excluded of this chapter if it was valid for being used as fertilizers (chapter 31).
- 6- For the purposes of heading 38.25, the term "other waste" is applied to the following:
- (a) The medical waste which are the contaminated waste resulting of medical research, diagnosis, treatment or other medical, surgical operations, dentistry or veterinary medicine which mostly cover microorganisms and pharmaceutical materials and require special procedures for disposal thereof (such as: contaminated dressings, used gloves and used syringes).
  - (b) The waste of organic solvents.
  - (c) The remainders of chemical cleaning solutions, hydraulic liquids, brake-liquids and anti-freezing solutions.
  - (d) Other waste of chemical industries or of industries related thereto.
- However, the term "other waste" does not cover the waste principally containing petroleum oils or the oils obtained of bituminous mineral materials (heading 27.10).

**Sub-headings Note:**

**6- For the purposes of sub-headings 382541 and 382549, the "waste of organic solvents" are waste which principally contain organic solvents that are unfit at their present shape as initial products, whether or not prepared for retrieving (restoring) the solvents.**

## Section VII

### Plastics and Articles Thereof, Rubber and Articles Thereof

#### Notes:

- 1- Goods put up in sets consisting of two or more separate constituents some or all of which fall in this section and are intended to be mixed together to obtain a product of section VI or VII are to be classified in the heading appropriate to that product, provided that the constituents are:
  - a- Obviously recognizable according to the manner in which they are put up, as being prepared for utilization together without re-packaging.
  - b- Presented (introduced) together.
  - c- Identifiable with regard to their nature or their quantities percentages as complementary to each other.
- 2- Except for the goods of headings of 39.18 or 39.19, the plastics, rubber and the articles of these materials which are printed or photographed where the printing or photography therein are not secondary matter but their role is basic when being used (on application) fall in chapter 49.

## Chapter 39

### Plastics and Articles Thereof

#### Notes:

- 1- The term "plastics" in the customs tariff table means the materials of headings of 39.01 to 39.14 which, if being subjected to an external effect (in general temperature and pressure, and, when required, utilization of solvent or plasticizer), can – during polymerization stage or in a subsequent stage – take shapes by molding, casting, hauling, foliating or any other process and remain keeping them after termination of such external effect.

The term "plastics" in the customs tariff table also covers the vulcanized fibers. This term does not apply to the materials which are considered as textile materials covered in section XI.

- 2- This chapter does not cover:

(a) Waxes covered in headings 27.12 or 34.04.

(b) Separate chemically defined organic compounds (chapter 29).

- (c) Heparin and its salts (heading 30.01).**

3- Headings 39.01 to 39.11 apply only to products obtained by chemical synthesis falling in the following categories:

(a) Liquid synthetic poly-olefins where less than 60% of their volume is distilled at the temperature of 300 (degrees centigrade) after transformation to 1,013 millibar on application of a distillation process with low pressure (headings 39.01 and 39.02).

(b) Resins which are not with high polymerization of genus Coumarone-Endean (heading 39.11).

(c) Other synthetic polymers where their monomers units average is 5 units at least.

(d) Silicones (heading 39.10).

(e) Resoles (heading 39.09) and other pre-polymers.

4- The expression "compound polymers" "copolymers" means all polymers where not any individual unit of their monomers compose the percentage of 95% or more by weight of the total polymer components.

For the purposes of this chapter, and unless stated otherwise, the compound polymers (copolymers) (including the products of compound chemical condensation process (co-poly condensate), the products of internal organization, in addition to various fractions (co-poly addition), the agglomerated compound polymers and the grafted compound polymers) and the mixtures of polymers are covered in the heading which contains the polymers of that co-monomer predominant by weight over any co-monomer individually. In order to apply this note, the units of co-monomers composing the polymers which are covered in the same heading should be treated as one unit "i.e., they should be calculated together".

If no single co-monomer is predominant by weight, the compound polymers or the mixtures of polymers are covered, according to the case, in the heading which comes subsequently in the serial order of headings that can be taken into consideration for the classification.

- 5- Chemically-modified polymers, where only the parts subordinate to the main polymer series are changed by chemical interaction, should be classified in the heading appropriate to the non-modified polymer. These provisions do not apply to the grafted compound polymers.
- 6- According to the concept of headings 39.01 to 39.14, the expression of "primary forms" applies only to the following shapes:
- (a) Liquids and pastes, including dispersions (emulsifiers and suspended solutions) and liquids.
  - (b) Rough pellets, pieces, grits (grouts) or powders (including the molding powders), granules, chips and similar blocks of irregular shapes.
- 7- Heading 39.15 does not cover the waste, remainders, clips and scrapes referring to the same material that can be plasticized by heating and transformed to the primary shapes (headings 39.01 to 39.14).
- 8- For the purposes of heading 39.17, the expression "tubes, pipes and hoses" means hollow products, whether or not finished products or semi-manufactured, of used in general for transporting, connecting or distributing gases or liquids (such as ribbed polygonal fire hoses and perforated pipes). However, this term covers the covers of sausage (thick or thin) and the other flattened tubes. But, in exception to what was lately mentioned, the having an internal cross-section which is non-circular, non-flattened or rectangular (where the length does not exceed one and half times the width) or having the regular polygon shape, are not considered as tubes, pipes or hoses, but as special shapes (profiles).
- 9- For the purposes of heading 39.18, the expression "covers of walls or ceilings of plastics" means products in coils (rolls) with width not less than 45 cm, utilizable for decorating walls or ceilings, composed of plastics permanently fixed on backing (stand) of any material other than paper, where the layer of plastics therein (on the apparent face) are granulated, variegated (dappled), colored, printed by ornamentations or decorated by any method whatsoever.
- 10- In headings 39.20 or 39.21, the expression "boards, plates, rolls, ribbons (strips) and thongs (straps)" means only the boards, plates, rolls, ribbons (strips) and thongs (straps) (other than those of chapter 54), and the pellets having regular geometric shapes, whether or not printed or otherwise surface-processed, non-cut, or cut in rectangular or square shapes, but not processed to a larger extent (whether the cutting process endowed (availed) thereto the quality of ready-for-use).
- 11- Heading 39.25 applies only to the following articles, i.e., the products which were not incorporated in any of the previous headings of sub-chapter 2:
- (a) Tanks and reservoirs (including organic remains reservoirs), casks (vats) and similar containers with capacity exceeding 300 liters.
  - (b) Constructional elements particularly used in floors, walls, partitions, ceilings or roofs.
  - (c) Spouts (gargoyles) and their accessories.
  - (d) Doors, windows, their frames and doorsills (thresholds).
  - (e) Verandas (balconies), handrails, fences, gates and similar enclosures.

- (f) Shutters of windows, doors, plastic internal curtains (including the polygon curtains), similar , their parts and accessories.
- (g) Large shelves prepared for permanent installation and fixation, e.g., in stores, workshops or warehouses.
- (h)Ornamentations and architectural decorative shapes particularly ridged (jagged) decorations, domes (cupolas) and dovecots.
- (i) Fittings and mountings intended for permanent installation in or on doors, windows, staircases, walls and other parts of buildings, such as handles (knobs), cables, arches (vaults), towel backings (Stands), keyboards and other protective boards.

**Sub-headings Note:**

1- Within any of these chapter headings, polymers, including compound polymers "copolymers" and chemically modified polymers, are classified according to the following provisions:

(a) When there is a sub-heading under the name "other" at the same serial order of specific sub-headings:

- 1- The meaning of the term "poly" at the beginning of the name polymer in any sub-heading (e.g., poly-ethylene and poly-amide –6,6) means that the unit (or units) of monomer composing such polymer, when taken together, should reach 95% or more by weight of the total polymer content.
- 2- Compound polymers of the sub-headings 39 01 30, 39 03 00, 39 03 30 and 39 04 30 are classified in these sub-headings, provided that the co-monomer units of such compound polymers represent 95% or more by weight of the total polymer content.
- 3- Chemically modified polymers are classified in the sub-heading named "other", provided that the chemically modified polymers are not covered in any other more specific sub-heading.
- 4- Polymers, where the conditions identified in the above-mentioned paragraphs 1-, 2-, or 3- do not apply, are classified in the sub-heading, among the sub-headings remaining in the serial order, which covers the polymers of the monomer unit predominant by weight over any other co-monomer unit individually. For that reason, the units of mono fractions composing the polymers covered in the same sub-heading should be collectively taken.

The units of co-monomers, composed only of polymers in the same serial order of the considered sub-headings, should be compared among themselves.

(b) In case when there is not a sun-heading named "other" in the same serial order:

- 1- Polymers are classified in the sub-heading covering polymers of the same monomer unit that exceeds by weight any of other monomer units individually. For this purpose, monomer units covered in the same sub-heading should be calculated together without comparing except for the co-monomer units composing polymers of the considered serial order (series).

2- Chemically-modified polymers are classified in the sub-heading subordinated to the non-modified polymers.

Mixtures of polymers are classified in the same sub-heading as polymers at the same monomer units and the same percentages.

3- For the purposes of sub-heading 39 20 43 00, the term plasticizers covers the secondary plasticizers.

## Chapter 40

### Rubber and Articles Thereof

#### Notes:

1- The term "rubber" in the customs tariff table means, unless stated otherwise, the following products, whether or not vulcanized or solidified: natural rubber, balata, gutta-percha, guayule, chicle, similar natural gums, synthetic rubber and substitutes of rubber derived from oils (vactis) as well as the renewed articles of these products.

2- This chapter does not cover:

(a) Products of section XI (textiles and their articles).

(b) Shoes and their parts (chapter 64).

(c) Headgears (head dresses) and their parts (including bath covers (bathing caps) of chapter 65.

(d) Mechanical or electrical equipment and their parts of solidified rubber for electrical technical applications of section XVI.

(e) Products of chapters 90, 92, 94 or 96.

(f) Articles of chapter 95 (except for sports gloves, gloves covering fingers except for the thumb (mittens) and the gloves which let the fingers uncovered (mitts) and articles of headings 40.11 to 40.13.

3- The expression "primary forms", of headings 40.01 to 40.03 and 40.05, applies only to the following forms:

(a) Liquids and pastes (including juices of natural rubber "latex" subjected to primary vulcanization and other dispersions and solutions).

(b) Rough-shaped pellets, similar pieces, spheres, powders, granules, crumbs (fragments) and pellets which are incoherent.

4- The expression "synthetic rubber" in note 1- of this chapter and heading 40.02 applies to:

(a) Synthetic unsaturated materials which can be finally transformed to heat-elastomerized materials by sulfate- vulcanization and which are not broken by extension (elongation) at the rate of three times their original length within temperature ranging of 18 to 29 degrees centigrade, after subjecting to extension which equals two times their original length, they restore (return to) a length not exceeding one and half their original length through five minutes. In order to apply this test, it is allowed to add the necessary materials for contrastive correlation (inversion) as activators or accelerators of vulcanization, and it is also permitted to add the materials of note 5-b 2 and 3. However, it is not allowed to present any material which is not necessary for contrastive correlation (inversion) such as coloring, elongating and fillers.

(b) Thio-blast (TM).

(c) Natural rubber modified by grafting or mixing with plastics, non-polymerized natural rubber and mixtures of non-saturated synthetic materials with highly saturated synthetic polymers, provided that the

conditions appropriate for vulcanization, elongation and restoration identified in the above-mentioned paragraph (a) are available in all these products.

5- (a) Headings 40.01 and 40.02 do not cover rubber or the mixtures of rubber added before or after coagulation with the following:

- 1- Accelerators, inhibitors, activators or other vulcanized agents (other than those added for preparing natural rubber "latex" that was subjected to primary vulcanization juices (extracts)).
- 2- Surface colors (pigments) and other coloring materials, other than those which are only added for facilitation.
- 3- Elastomerizing materials or extension (elongation) agents (except for mineral oils in case of rubber extended by oil), filling, inactive or active materials, organic solvents or any other material, except for those allowed in the below-mentioned paragraph (b).

(b) Rubber and mixtures of rubber containing the following materials remain, as the case may be, covered in headings 40.01 or 40.02, provided that such rubber or mixtures of rubber keep (maintain) their basic properties as raw materials:

- 1- Emulsifiers or anti-viscosity agents.
- 2- Small quantities of emulsifiers' dissociation products parts.
- 3- Very small quantities of the following:

Heat-sensitive agents (in general to obtain heat-sensitive latex), cationic surface agents (in general to obtain latex including positive electrical charges), anti-oxidants, coagulants, fragmentation agents, anti-freezing agents, factors which help in transforming to colloidal liquid, agents which are preserving, fixates, viscosity control agents or other similar added materials for specific purposes.

- 6- For the purposes of heading 40.04, the term "waste, clips and remains" means waste, clips and remains residual of the operation of manufacturing and processing rubber and products fabricated of rubber that are finally unfit for utilization in industry because of tearing (laceration), frizzling or other reasons.
- 7- The threads of vulcanized rubber which largest cross-section measurement does not exceed 5 mms are classified as ribbons (strips), bars or special shapes (profiles) in heading 40.08.
- 8- Heading 40.10 covers belts of transporting, belts of machines made of textiles which are saturated, coated, covered, stratified or dressed by rubber.
- 9- The expressions "plates", "boards" and "strips" in headings 40.01, 40.02, 40.03, 40.05 and 40.08 means only the plates, boards, strips and pellets with regular geometric shape, uncut or merely cut to squares or rectangles, whether such cutting availed them the quality of products which are ready for use, whether or not printed or otherwise surface processed, but not cut to another shapes or processed to a larger extent.

But the expressions "bars and special shapes (profiles)" of heading 40.08 means the special shapes (profiles) that whether or not cut to specific lengths and surface-processed, however, were not subjected to other processing to a larger extent.

  - a) 85 g in the case of silk, waste silk or artificial or synthetic filament yarn; or
  - b) 125 g in other yarn.

**(b) Exceptions to the above mentioned provision:**

- 1- Single yarn of any textile material, except:

7. For the purposes of this section, the expression “made up articles” means:
- (a) Articles cut otherwise than squares or rectangles;
- (b) Articles produced in the finished state, ready for use or merely needing separation by cutting dividing threads, without sewing or other working, e.g., certain dusters, towels, table cloths, scarf squares and blankets);
- (c) Articles hemmed, with rolled edges, or with a knotted fringe at any edge, but excluding fabrics where cut “without margin” edges have been prevented from unraveling by whipping or by other simple means;
- (d) Articles cut to size and having undergone a process of drawn thread;
- (e) Articles assembled by sewing, gumming or otherwise (other than piece goods consisting of two or more lengths of identical material joined end to end and piece goods composed of two or more textiles assembled in layers, whether or not padded);
- (f) Articles knitted or crocheted to shape, whether presented as separate items or in the form of a number of items in length.

8. For the purposes of chapters 50 to 60:
- (a) Chapters 50 to 55 and 60 and, except where the context otherwise requires, chapters 56 to 59 do not apply to articles made up within the meaning of above-mentioned note 7; and
  - (b) Chapters 50 to 55 and 60 do not apply to articles of chapters 56 to 59.
9. The woven fabrics of chapters 50 to 55 include fabrics consisting of layers of parallel textile yarns superimposed on each other at acute or right angles. These layers are bonded together at yarns intersections by adhesive or thermal bonding.
10. Rubber products consisting of textile materials combined with rubber threads are classified in this section.
11. For the purposes of this section, the term “impregnated” includes “dipped”.
12. For the purposes of this section, the term “polyamides” includes “aramids”.
13. Unless the context otherwise requires, textile garments of different headings are to be classified in their own headings even if put up in sets for retail sale. For the purposes of this note, the expression “textile garments” means garments of headings 61.01 to 61.14 and headings 62.01 to 62.11.

#### **SUBHEADING NOTES**

1. In this Section and, where applicable, throughout the customs tariffs table, the following expressions have the meanings hereby assigned to them:

(a) **Elastomeric yarn:**

Filament yarn, (including monofilament), of synthetic textile material, other than textured yarn, which does not break on being extended to three times its original length and which returns, after being extended to twice its original length, within a period of five minutes, to a length not greater than one and a half times its original length.

(b) **Unbleached yarn:**

Yarn which:

- 1- Has natural color of its constituent fibers and has neither been bleached, dyed (whether or not in the mass) nor printed; or
- 2- Is of indeterminate color (“grey yarn”), manufactured from garneted stock.

Such yarn may have been treated with a colorless dressing or fugitive dye (which disappears after simple washing with soap) and, in the case of artificial or synthetic fibers, treated in the mass with delustering agents (e.g., titanium dioxide).

**(c) Bleached yarn:**

Yarn which:

- 1- Has undergone a bleaching process, is made of bleached fibers or, unless the context otherwise requires, has been dyed white (whether or not in the mass) or treated with a white dressing;
- 2- Consists of a mixture of unbleached and bleached fibers; or
- 3- Is multiple folded or cabled and consists of unbleached and bleached yarns.

**(d) Colored (dyed or printed) yarn:**

Yarn which:

- 1- Is dyed (whether or not in the mass) other than white or in a fugitive color, or printed, or made from dyed or printed fibers;
- 2- Consists of a mixture of dyed fibers of different colors or of a mixture of unbleached or bleached fibers with colored fibers (marl or mixture yarns), or is printed in one or more colors at intervals to give the impression of dots (variegated or speckled yarn);
- 3- Is obtained from printed slivers or roving; or
- 4- Is multiple folded or cabled and consists of unbleached or bleached yarn and colored yarn.

The above definitions also apply, mutatis mutandis, to monofilament and strip or the like forms of chapter 54.

**(e) Unbleached woven fabric:**

Woven fabric made from unbleached yarn which has neither been bleached, dyed nor printed. Such fabric may have been treated with a colorless dressing or a fugitive dye.

**(f) Bleached woven fabric:**

Woven fabric which:

- 1- Has been "bleached" or, unless the context otherwise requires, dyed white or treated with a white dressing, in the long;
- 2- Consists of bleached yarn; or
- 3- Consists of both unbleached and bleached yarn.

**(g) Dyed woven fabric:**

Woven fabric which:

- 1- Is dyed a single uniform color other than white (unless the context otherwise requires) or has been treated with a colored finish other than white (unless the context otherwise requires), in the long; or
- 2- Consists of colored yarn of a single uniform color.

**(h) Woven yarns fabric of different colors:**

Woven fabric (other than printed woven fabric) which:

- 1- Consists of yarns of different colors or yarns of different shades of the same color (other than the natural color of constituent fibers);
- 2- Consists of unbleached or bleached yarn and colored yarn; or
- 3- Consists of marl or mixture yarns.

(In all cases, the yarn used in selvages and ends is not taken into consideration).

**(i) Printed woven fabric:**

Woven fabric which printed in the long, whether or not made from yarns of different colors. Also regarded as printed woven fabrics: woven fabrics bearing designs made, e.g., with a brush or spray gun, by means of transfer paper, by flocking or by the batik process).

The process of mercerization does not affect classification of yarns or fabrics within the above-mentioned categories.

Definitions at above-mentioned (e) to (i) apply, mutatis mutandis, to knitted or crocheted fabrics.

**(j) Plain weave:**

A fabric construction where each yarn of weft passes alternately over and under successive yarns of warp and each yarn of warp passes alternately over and under successive yarns of weft.

2. (a) Products of chapters 56 to 63 containing two or more textile materials are to be regarded as consisting wholly of that textile material which would be selected for the classification of a product of chapters 50 to 55 or heading 58.09 consisting of the same textile materials, under note 2 to this section.

**(b) For application of this rule:**

- 1- Where appropriate, only the part which determines the classification under the customs tariffs table general interpretative rule 3 shall be taken into account;
- 2- In case of textile products consisting of a ground fabric and a pile or looped surface no account shall be taken of the ground fabric;
- 3- In the case of embroidery of heading 58.10 and products thereof, only the ground fabric shall be taken into account. However, embroidery without visible ground, (chemical, aerial, or ground-cut) and products thereof shall be classified with reference to the embroidering threads alone.

Cotton**

**Sub-heading Note:**

**1- For the purposes of subheadings 52 09 42 00 and 52 11 42 00, the expression “denim” means fabrics of yarns of different colors, of three-thread or four-thread twill, including broken twill, warp faced, where warp yarns are of one and the same color and where the weft yarns are unbleached, bleached, dyed grey or colored a lighter shade of warp yarns color.**

**Chapter 54**  
**Synthetic or Artificial Filaments**

**Sub-heading Note:**

1- Throughout the customs tariffs table, the expression “synthetic or artificial fibers” means staple fibers and filaments of organic polymers produced by manufacturing processes, either:

(a) By polymerization of organic monomers, such as polyamides, polyesters, polyurethanes or polyvinyl derivatives; or

(b) By chemical transformation of natural organic polymers (e.g., cellulose, casein, proteins or algae), such as viscose rayon, cellulose acetate, cupro or alginates

The term “synthetic” means: fibers as defined at paragraph (a) above; and the term “artificial” means: fibers as defined at paragraph (b) above.

The expression “synthetic or artificial”, shall have the same meaning when used in relation to “textile materials”.

2- Headings 54.02 and 54.03 do not apply to synthetic or artificial filament tow of chapter 55.

Synthetic or Artificial Staple Fibers**

**Note:**

**1- Headings 55.01 and 55.02 apply to synthetic or artificial filament tow, consisting of parallel filaments of a uniform length equal to the length of tow, meeting the following specifications:**

**(a) Length of tow exceeding 2 m;**

**(b) Twist less than 5 turns per meter;**

**(c) Measuring per filament less than 67 decitex;**

**(d) With regard only to synthetic filament tow, such tow must be drawn so as to be non-stretchable by more than 100% of its length;**

**(e) Total measurement of tow more than 20 000 decitex.**

**Tows of length not exceeding (two meters) are to be classified in headings 55.03 or 55.04**

**Chapter 56**  
**Wadding, Felt & Non-wovens; Special Yarns;**  
**Twine, Cordage, Ropes & Cables and Articles Thereof**

**Notes:**

**3- This Chapter does not cover:**

- (a) Wadding, felt or non-wovens, impregnated, coated or covered with substances or preparations (e.g., perfumes or cosmetics preparations of chapter 33, soaps or detergents of heading 34.01, polishes, creams or similar preparations of heading 34.05, fabric softeners of heading 38.09) where textile material is present merely as a carrier or a carrying medium;**
- (b) Textile products of heading 58.11;**
- (c) Natural or artificial abrasive powder or grain, on a backing of felt or non-wovens (heading 68.05);**
- (d) Agglomerated or reconstituted mica, on a backing of felt or non-wovens (heading 68.14);**
- (e) Papers or metal foil on a backing of felt or non-wovens (section XV);**

**4- The term “felt” includes needle-loom felt and fabrics consisting of a web of textile fibers which cohesion has been enhanced by (stitch-bonding) process using fibers from the same web.**

**5- Headings 56.02 and 56.03 respectively cover felt and non-wovens, impregnated, coated, covered or laminated with plastics or rubber, whatever these materials' nature ((non-cellular)compact or cellular).**

**Heading 56.03 also includes non-wovens where plastics or rubber form the bonding substance.**

**However, neither heading 56.02 nor heading 56.03 covers:**

- (a) Felt, impregnated, coated, covered or laminated with plastics or rubber, containing 50% or less by weight of textile material or felt completely embedded in plastics or rubber (chapters 39 or 40);**
- (b) Non-wovens, either completely embedded in plastics or rubber, or entirely coated or covered on both sides with such materials, provided that such coating or covering is apparent and can be seen to the naked eye with no account being taken of any resulting color change (chapters 39 or 40);**
- (c) Plates, sheets or strip of cellular plastics or cellular rubber combined with felt or non-wovens, where textile material is present merely for reinforcing purposes (chapter 39 or 40).**

**6- Heading 56.04 does not cover textile yarn, or strip or the like of heading 54.04 or 54.05, where impregnation, coating or covering is unapparent and cannot be seen with the naked eye (in general, chapters 50 to 55); for the purpose of this provision, no account should be taken of any resulting color change.**

**Chapter 59**  
**Impregnated, Coated, Covered or Laminated Textile Fabrics; Textile Articles of a Kind Suitable for Industrial Use**

**Notes:**

- 1- Except where the context otherwise requires, for the purposes of this chapter the expression “textile fabrics” applies only to the woven fabrics of chapters 50 to 55 and headings 58.03 and 58.06, the braids and ornamental trimmings in the piece of heading 58.08 and the knitted or crocheted fabrics of headings 60.02 to 60.06.
- 2- Heading 59.03 applies to:
  - a) Textile fabrics, impregnated, coated, covered or laminated with plastics, whatever the weight per square meter and whatever the nature of plastic material (compact or cellular), other than:
    - 1) Fabrics in which impregnation, coating or covering cannot be seen with the naked eye (usually chapters 50 to 55, 58 or 60); for the purpose of this provision, no account should be taken of any resulting change of color;
    - 2) Products which cannot, without fracturing, be bent manually around a cylinder of a diameter of 7 mm, at a temperature between 15°C and 30°C (usually chapter 39);
    - 3) Products in which the textile fabric is either completely embedded in plastics or entirely coated or covered on both sides with such material, provided that such coating or covering can be seen with the naked eye with no account being taken of any resulting change of color (chapter 39);
    - 4) Fabrics partially coated or partially covered with plastics and bearing designs resulting from these treatments (usually chapters 50 to 55, 58 or 60);
    - 5) Plates, sheets or strip of cellular plastics, combined with textile fabric, where the textile fabric is present merely for reinforcing purposes (chapter 39); or
    - 6) Textile products of heading 58.11;
  - b) Fabrics made from yarn, strip or the like, impregnated, coated, covered or sheathed with plastics, of heading 56.04.
- 3- For the purposes of heading 59.05, the expression “textile wall coverings” applies to products in rolls, of a width of not less than 45 cm, suitable for wall or ceiling decoration, consisting of a textile surface which has been fixed on a backing or has been treated on the back (impregnated or coated to permit pasting). This heading does not, however, apply to wall coverings consisting of textile flock or dust fixed directly on a backing of paper (heading 48.14) or on a textile backing (generally heading 59.07).
- 4- For the purposes of heading 59.06, the expression “rubberized textile fabrics” means:
  - a) Textile fabrics impregnated, coated, covered or laminated with rubber, with the following characteristics:
    - i) Weighing not more than 1 500 g/m<sup>2</sup>; or

- ii) Weighing more than 1 500 g/m<sup>2</sup> and containing more than 50% by weight of textile material;
- b) Fabrics made from yarn, strip or the like, impregnated, coated, covered or sheathed with rubber, of heading 56.04; and
- c) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square meter.

This heading does not, however, apply to plates, sheets or strip of cellular rubber, combined with textile fabric, where the textile fabric is present merely for reinforcing purposes (chapter 40), or textile products of heading 58.11.

**5- Heading 59.07 does not apply to:**

- a) Fabrics in which the impregnation, coating or covering cannot be seen with the naked eye (usually chapters 50 to 55, 58 or 60); for the purpose of this provision, no account should be taken of any resulting change of color;
- b) Fabrics painted with designs (other than painted canvas being theatrical scenery, studio back-cloths or the like);
- c) Fabrics partially covered with flock, dust, powdered cork or the like and bearing designs resulting from these treatments; however, imitation pile fabrics remain classified in this heading;
- d) Fabrics finished with normal dressings having a basis of amylaceous or similar substances;
- e) Wood veneered on a backing of textile fabrics (heading 44.08);
- f) Natural or artificial abrasive powder or grain, on a backing of textile fabrics (heading 68.05);
- g) Agglomerated or reconstituted mica, on a backing of textile fabrics (heading 68.14); or
- h) Metal foil on a backing of textile fabrics (section XV).

**6- Heading 59.10 does not apply to:**

- a) Transmission or conveyor belting, of textile material, of a thickness of less than 3 mm; or
- b) Transmission or conveyor belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated, coated, covered or sheathed with rubber (heading 40.10).

**7- Heading 59.11 applies to the following goods, which do not fall in any other heading of section XI:**

- a) Textile products in the piece, cut to length or simply cut to rectangular (including square) shape (other than those having the character of headings 59.08 to 59.10 products), the following only:
  - i) Textile fabrics, felt and felt-lined woven fabrics, coated, covered or laminated with rubber, leather or other material, of a kind used for card clothing, and similar fabrics of a kind used for other technical purposes, including narrow fabrics made of velvet impregnated with rubber, for covering weaving spindles (weaving beams);
  - ii) Bolting cloth;
  - iii) Straining cloth of a kind used in oil presses or the like, of textile material or of human hair;
  - iv) Flat woven textile fabrics with multiple warp or weft, whether or not felted, impregnated or coated, of a kind used in machinery or for other technical purposes;
  - v) Textile fabrics reinforced with metal, of a kind used for technical purposes;
  - vi) Cords, braids and the like, whether or not coated, impregnated or reinforced with metal, of a kind used in industry as packing or lubricating materials;
- b) Textile articles (other than those of headings 59.08 to 59.10) of a kind used for technical purposes (for example, textile fabrics and felts, endless or fitted with linking devices, of a kind used in paper-making or similar machines (for example, for pulp or asbestos-cement), gaskets, washers, polishing discs and other machinery parts).

**Chapter 61**  
**Articles of Apparel & Clothing Accessories, Knitted or Crocheted**

**Notes:**

- 1. This chapter applies only to the made up knitted or crocheted articles.**
- 2. This chapter does not cover:**
  - a) Goods of heading 62.12**
  - b) Worn clothing or other worn articles of heading 63.09; or**
  - c) Orthopedic appliances, surgical belts, trusses or the like (heading 90.21).**
- 3. For the purposes of headings 61.03 and 61.04:**
  - a) The term “suit” means a set of garments composed of two or three pieces made up, in respect of their outer surface, in identical fabric and comprising:**
    - One suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition whose front is made from the same fabric as the outer surface of the other components of the set and whose back is made from the same fabric as the lining of the suit coat or jacket; and**
    - One garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs. All of the components of a “suit” must be of the same fabric construction, color and composition; they must also be of the same style and of corresponding or compatible size. However, these components may have piping (a strip of fabric sewn into the seam) in a different fabric. If several separate components to cover the lower part of the body are presented together (for example, two pairs of trousers or trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be one pair of trousers or, in the case of women’s or girls’ suits, the skirt or divided skirt, the other garments being considered separately. The term “suit” includes the following sets of garments, whether or not they fulfill all the above conditions:**
      - Morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;**
      - Evening dress (tail-coat), generally made of black fabric, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;**
      - Dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.**
  - b) The term “ensemble” means a set of garments (other than suits and articles of heading 61.07, 61.08 or 61.09), composed of several pieces made up in identical fabric, put up for retail sale, and comprising:**
    - one garment designed to cover the upper part of the body, with the exception of pullovers which may form a second upper garment in the sole context of twin sets, and of waistcoats which may also form a second upper garment, and**
    - one or two different garments, designed to cover the lower part of the body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt. All of the components of an ensemble must be of the same fabric construction, style, color and composition; they must also be of corresponding or compatible size. The term “ensemble” does not apply to track suits or ski suits, of heading 61.12.**
- 4. Headings 61.05 and 61.06 do not cover garments with pockets below the waist, with a ribbed waistband or other means of tightening at the bottom of the garment, or garments having an average of less than 10 stitches per linear centimeter in each direction counted on an area measuring at least 10 cm x 10 cm. Heading 61.05 does not cover sleeveless garments.**
- 5. Heading 61.09 does not cover garments with a drawstring, ribbed waistband or other means of tightening at the bottom of the garment.**

6. For the purposes of heading 61.11:

- a) The expression “babies’ garments and clothing accessories” means articles for young children of a body height not exceeding 86 cm; it also covers babies’ napkins;
- b) Articles which are, prima facie, classifiable both in heading 61.11 and in other headings of this Chapter are to be classified in heading 61.11.

7. For the purposes of heading 61.12, “ski suits” means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or alpine). They consist either of:

- a) A “ski overall”, that is, a one-piece garment designed to cover the upper and the lower parts of the body; in addition to sleeves and a collar the ski overall may have pockets or foot straps; or
- b) a “ski ensemble”, that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
  - One garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
  - One pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The “ski ensemble” may also consist of an overall similar to the one mentioned in paragraph a) above and a type of padded, sleeveless jacket worn over the overall. All the components of a “ski ensemble” must be made up in a fabric of the same texture, style and composition, whether or not of the same color, they must also be of corresponding or compatible size.

8. Garments which are, prima facie, classifiable both in heading 61.13 and in other headings of this chapter, excluding heading 61.11, are to be classified in heading 61.13.

9. Garments of this chapter designed for left over right closure at the front shall be regarded as men’s or boys’ garments and those designed for right over left closure at the front as women’s or girls’ garments. These provisions do not apply where the cut of the garment clearly indicates that it is designed for one or other of the sexes. Garments which cannot be identified as either men’s or boys’ garments or as women’s or girls’ garments are to be classified in the headings covering women’s or girls’ garments.

10. Articles of this chapter may be made of metal thread.

### Articles of Apparel and Clothing Accessories, Not Knitted or Crocheted

#### Notes:

1. This chapter applies only to made up articles of any textile fabric other than wadding, excluding knitted or crocheted articles (other than those of heading 62.12).
2. This Chapter does not cover:
  - a) Worn clothing or other worn articles of heading 63.09; or
  - b) Orthopedic appliances, surgical belts, trusses or the like (heading 90.21).
3. For the purposes of headings 6203 and 6204:
  - a) The term "suit" means a set of garments composed of two or three pieces made up, in respect of their outer surface, in identical fabric and comprising:
    - One suit coat or jacket the outer shell of which, exclusive of sleeves, consists of four or more panels, designed to cover the upper part of the body, possibly with a tailored waistcoat in addition whose front is made from the same fabric as the outer surface of the other components of the set and whose back is made from the same fabric as the lining of the suit coat or jacket; and
    - One garment designed to cover the lower part of the body and consisting of trousers, breeches or shorts (other than swimwear), a skirt or a divided skirt, having neither braces nor bibs.All of the components of a "suit" must be of the same fabric construction, color and composition; they must also be of the same style and of corresponding or compatible size. However, these components may have piping (a strip of fabric sewn into the seam) in a different fabric.  
If several separate components to cover the lower part of body are presented together (for example, two pairs of trousers or trousers and shorts, or a skirt or divided skirt and trousers), the constituent lower part shall be one pair of trousers or, in the case of women's or girls' suits, the skirt or divided skirt, the other garments being considered separately.  
The term "suit" includes the following sets of garments, whether or not they fulfill all the above conditions:
    - Morning dress, comprising a plain jacket (cutaway) with rounded tails hanging well down at the back and striped trousers;
    - Evening dress (tailcoat), generally made of black fabric, the jacket of which is relatively short at the front, does not close and has narrow skirts cut in at the hips and hanging down behind;
    - Dinner jacket suits, in which the jacket is similar in style to an ordinary jacket (though perhaps revealing more of the shirt front), but has shiny silk or imitation silk lapels.
  - b) The term "ensemble" means a set of garments (other than suits and articles of heading 62.07 or 62.08) composed of several pieces made up in identical fabric, put up for retail sale, and comprising:

    - One or two different garments, designed to cover the lower part of body and consisting of trousers, bib and brace overalls, breeches, shorts (other than swimwear), a skirt or a divided skirt.All of the components of an ensemble must be of the same fabric construction, style, color and composition; they must also be of corresponding or compatible size. 6. For the purposes of heading 62.11, “ski suits” means garments or sets of garments which, by their general appearance and texture, are identifiable as intended to be worn principally for skiing (cross-country or mountain-slopes). They consist either of:
- a) A “ski overall”, that is, a one-piece garment designed to cover the upper and the lower parts of body; in addition to sleeves and a collar. The ski overall may have pockets or foot straps; or
  - b) A “ski ensemble”, that is, a set of garments composed of two or three pieces, put up for retail sale and comprising:
    - One garment such as an anorak, wind-cheater, wind-jacket or similar article, closed by a slide fastener (zipper), possibly with a waistcoat in addition, and
    - One pair of trousers whether or not extending above waist-level, one pair of breeches or one bib and brace overall.

The “ski ensemble” may also consist of an overall similar to the one mentioned in paragraph a) above and a type of padded, sleeveless jacket worn over the overall.

These provisions do not apply where the cut of the garment clearly indicates that it is designed for one or other of the sexes.

**Chapter 70**  
**Glass and Glassware**

**Notes:**

**1. This chapter does not cover:**

- a) Goods of heading 32.07 (for example, vitrifiable enamels and glazes, glass frit, other glass in the form of powder, granules or flakes);
- b) Articles of chapter 71 (for example, imitation jewelers);
- c) Optical fiber cables of heading 85.44, electrical insulators (heading 85.46) or fittings of insulating material of heading 85.47;
- d) Optical fibers, optically worked optical elements, hypodermic syringes, artificial eyes, thermometers, barometers, hydrometers or other articles of chapter 90;
- e) Lamps or lighting fittings, illuminated signs, illuminated name-plates or the like, having a permanently fixed light source, or parts thereof of heading 94.05;
- f) Toys, games, sports requisites, Christmas tree ornaments or other articles of Chapter 95 (excluding glass eyes without mechanisms for dolls or for other articles of chapter 95); or
- g) Buttons fitted vacuum flasks, scent or similar sprays or other articles of chapter 96.

**2. For the purposes of headings 70.03, 70.04 and 70.05:**

- a) Glass is not regarded as “worked” by reason of any process it has undergone before annealing;
- b) Cutting to shape does not affect the classification of glass in sheets;
- c) The expression “absorbent, reflecting or non-reflecting layer” means a microscopically thin coating of metal or of a chemical compound (for example, metal oxide) which absorbs, for example, infra-red light or improves the reflecting qualities of the glass while still allowing it to retain a degree of transparency or translucency; or which prevents light from being reflected on the surface of the glass.

**3. The products referred to in heading 7006 remain classified in that heading whether or not they have the character of articles.**

**4. For the purposes of heading 70.19, the expression “glass wool” means:**

- a) Mineral wools with a silica ( $\text{SiO}_2$ ) content not less than 60% by weight;
- b) Mineral wools with silica ( $\text{SiO}_2$ ) content less than 60% but with alkaline oxide ( $\text{K}_2\text{O}$  or  $\text{Na}_2\text{O}$ ) content exceeding 5% by weight or a boric oxide ( $\text{B}_2\text{O}_3$ ) content exceeding 2% by weight.

Mineral wools which do not comply with the above specifications fall in heading 68.06.

**5. Throughout the Nomenclature, the expression “glass” includes fused quartz and other fused silica.**

**Subheading Note:**

- 1. For the purposes of subheadings 7013 21, 7013 31 and 7013 91, the expression “lead crystal” means only glass having a minimum lead monoxide ( $\text{PbO}$ ) content by weight of 24%.

  - b) Of precious metal or of metal clad with precious metal, are to be classified in this chapter.
2. a) Headings 71.13, 71.14 and 71.15 do not cover articles in which precious metal or metal clad with precious metal is present as minor constituents only, such as minor fittings or minor ornamentation (for example, monograms, ferrules and rims), and paragraph b) of the foregoing Note does not apply to such articles.<sup>(1)</sup>
  - b) Heading 71.16 does not cover articles containing precious metal or metal clad with precious metal (other than as minor constituents).
3. This chapter does not cover:
  - a) Amalgams of precious metal, or colloidal precious metal (heading 28.43);
  - b) Sterile surgical materials, dental fillings or other goods of chapter 30;
  - c) Goods of chapter 32 (for example, luster's);

5. For the purposes of this chapter, any alloy (including a sintered mixture and an inter-metallic compound) containing precious metal is to be treated as an alloy of precious metal if any one precious metal constitutes as much as 2%, by weight, of the alloy. Alloys of precious metal are to be classified according to the following rules:
    - a) An alloy containing 2% or more, by weight, of platinum, is to be treated as an alloy of platinum;
    - b) An alloy containing 2% or more, by weight, of gold but no platinum, or less than 2%, by weight, of platinum, is to be treated as an alloy of gold;
    - c) Other alloys containing 2% or more, by weight, of silver are to be treated as alloys of silver.
  6. Except where the context otherwise requires, any reference in the customs tariffs table to precious metal or to any particular precious metal includes a reference to alloys treated as alloys of precious metal or of the particular metal in accordance with the rules in note 5 above, but not to metal clad with precious metal of note 7 or to base metal or non-metals plated with precious metal.
  7. Throughout the customs tariffs table the expression "metal clad with precious metal" means material made with a base of metal upon one or more surfaces of which there is affixed by soldering, brazing, welding, hot-rolling or similar mechanical means a covering of precious metal. Except where the context otherwise requires, the expression also covers base metal inlaid with precious metal.

2. Throughout the customs tariffs table, the expression “parts of general use” means:
  - a) Articles of heading 73.07, 73.12, 73.15, 73.17 or 73.18 and similar articles of other base metal;
  - b) Springs and leaves for springs, of base metal, other than clock or watch springs (heading 91.14); and
  - c) Articles of headings 83.01, 83.02, 83.08, 83.10 and frames and mirrors, of base metal, of heading 83.06.

In chapters 73 to 76 and 78 to 82 (but not in heading 73.15) references to parts of goods do not include references to parts of general use as defined above.

Subject to the preceding paragraph and to note 1 to chapter 83, the articles of chapter 82 or 83 are excluded from chapters 72 to 76 and 78 to 81.
  
3. Throughout the customs tariffs table, the expression “base metals” means: iron and steel, copper, nickel, aluminum, lead, zinc, tin, tungsten (wolfram), molybdenum, tantalum, magnesium, cobalt, bismuth, cadmium, titanium, zirconium, antimony, manganese, beryllium, chromium, germanium, vanadium, gallium, hafnium, indium, niobium (columbium), rhenium and thallium.

4. Throughout the customs tariffs table, the term “cermets” means products containing a microscopic heterogeneous combination of a metallic component and a ceramic component. The term “cermets” includes sintered metal carbides (metal carbides sintered with a metal).
5. Classification of alloys (other than Ferro-alloys and master alloys as defined in chapters 72 and 74):
  - a) An alloy of base metals is to be classified as an alloy of the metal which predominates by weight over each of the other metals;
  - b) An alloy composed of base metals of this section and of elements not falling within this section is to be treated as an alloy of base metals of this section if the total weight of such metals equals or exceeds the total weight of the other elements present;
  - c) In this section the term “alloys” includes sintered mixtures of metal powders, heterogeneous intimate mixtures obtained by melting (other than cermets) and inter-metallic compounds.
6. Unless the context otherwise requires, any reference in the customs tariffs table to a base metal includes a reference to alloys which, by virtue of note 5 above, are to be classified as alloys of that metal.

**7. Classification of composite articles:**

Except where the headings otherwise require, articles of base metal (including articles of mixed materials treated as articles of base metal under the customs tariffs table interpretative rules) containing two or more base metals are to be treated as articles of the base metal predominating by weight over each of the other metals.

For this purpose:

- a) Iron and steel, or different kinds of iron or steel, are regarded as one and the same metal;
  - b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of note 5, it is classified; and
  - c) Cermets of heading 81.13 are regarded as a single base metal.
8. In this section, the following expressions have the meanings hereby assigned to them:
- a) Waste and scrap:

Metal waste and scrap from manufacturing or mechanical working of metals, and metal goods definitely not usable as such because of breakage, cutting-up, wear or other reasons.
  - b) Powders:

Products of which 90% or more by weight passes through a sieve having a mesh aperture of 1 mm.

**CHAPTER 72**

These products are not presented in coils.

**j) Flat-rolled products:**

Rolled products of solid rectangular (other than square) cross-section, which do not conform to the definition at ij) above in the form of:

- Coils of successively superimposed layers, or
- Straight lengths, which if of a thickness less than 4.75 mm are of a width measuring at least ten times the thickness or if of a thickness of 4.75 mm or more are of a width which exceeds 150 mm and measures at least twice the thickness.

Flat-rolled products include those with patterns in relief derived directly from rolling (for example, grooves, ribs, chequers, tears, buttons, lozenges) and

those which have been perforated, corrugated or polished, provided that they do not thereby assume the character of articles or products of other headings.

Flat-rolled products of a shape other than rectangular or square, of any size, are to be classified as products of a width of 600 mm or more, provided that they do not assume the character of articles or products of other headings.

**k) Bars and rods, hot-rolled, in irregularly wound coils:**

Hot-rolled products in irregularly wound coils, which have a solid cross-section in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). These products may have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods).

**l) Other bars and rods:**

Products which do not conform to any of the definitions at i), j) or k) above or to the definition of wire, which have a uniform solid cross-section along their whole length in the shape of circles, segments of circles, ovals, rectangles (including squares), triangles or other convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). These products may:

- have indentations, ribs, grooves or other deformations produced during the rolling process (reinforcing bars and rods);
- be twisted after rolling.

**m) Angles, shapes and sections (profiles):**

Products having a uniform solid cross-section along their whole length which do not conform to any of the definitions at i), j), k) or l) above or to the definition of wire.

Chapter 72 does not include products of heading 73.01 or 73.02.

**n) Wire:**

Cold-formed products in coils, of any uniform solid cross-section along their whole length, which do not conform to the definition of flat-rolled products.

**o) Hollow drill bars and rods:**

Hollow bars and rods of any cross-section, suitable for drills, of which the greatest external dimension of the cross-section exceeds 15 mm but does not exceed 52 mm, and of which the greatest internal dimension does not exceed one half of the greatest external dimension. Hollow bars and rods of iron or steel not conforming to this definition are to be classified in heading 73.04.

2. Ferrous metals clad with another ferrous metal are to be classified as products of the ferrous metal predominating by weight.
3. Iron or steel products obtained by electrolytic deposition, by pressure casting or by sintering are to be classified, according to their form, their composition and their appearance, in the headings of this chapter appropriate to similar hot-rolled products.

## **SUBHEADING NOTES**

1. In this chapter the following expressions have the meanings hereby assigned to them:

**a) Alloy pig iron:**

**Pig iron containing, by weight, one or more of the following elements in the specified proportions:**

- More than 0.2% of chromium
- More than 0.3% of copper
- More than 0.3% of nickel
- More than 0.1% of any of the following elements: aluminum, molybdenum, titanium, tungsten (wolfram), vanadium.

**b) Non-alloy free-cutting steel:**

**Non-alloy steel containing, by weight, one or more of the following elements in the specified proportions:**

- 0.08% or more of sulphur
- 0.1% or more of lead
- More than 0.05% of selenium
- More than 0.01% of tellurium
- More than 0.05% of bismuth.

**c) Silicon-electrical steel:**

**Alloy steels containing by weight at least 0.6% but not more than 6% of silicon and not more than 0.08% of carbon. They may also contain by weight not more than 1% of aluminum but no other element in a proportion that would give the steel the characteristics of another alloy steel.**

**d) High speed steel:**

**Alloy steels containing, with or without other elements, at least two of the three elements molybdenum, tungsten and vanadium with a combined content by weight of 7% or more, 0.6% or more of carbon and 3% to 6% of chromium.**

**e) Silico-manganese steel:**

**Alloy steels containing by weight:**

- Not more than 0.7% of carbon,
- 0.5% or more but not more than 1.9% of manganese, and
- 0.6% or more but not more than 2.3% of silicon, but no other element in a proportion that would give the steel the characteristics of another alloy steel.

2. For the classification of Ferro-alloys in the subheadings of heading 72.02 the following rule should be observed:

**A Ferro-alloy is considered as binary and classified under the relevant subheading (if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in chapter note 1 c).**

By analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.

For the application of this rule the unspecified "other elements" referred to in chapter note 1 c) must each exceed 10% by weight.

**CHAPTER 73**  
**ARTICLES OF IRON OR STEEL**

**NOTES**

1. In this Chapter the expression “cast iron” applies to products obtained by casting in which iron predominates by weight over each of the other elements and which do not comply with the chemical composition of steel as defined in note 1 d) to chapter 72.

2. In this chapter the word “wire” means hot- or cold-formed products of any cross-sectional shape, of which no cross-sectional dimension exceeds 16 mm.

**Chapter 74**  
**Copper and Articles Thereof**

**Notes:**

1. In this chapter the following expressions have the meanings hereby assigned to them:

a) Refined copper:

Metal containing at least 99.85% by weight of copper; or metal containing at least 97.5% by weight of copper, provided that the content by weight of any other element does not exceed the limit specified in the following table:

**TABLE - Other elements**

Element		Element Limiting content % by weight
Silver	Ag	0.25
Arsenic	As	0.5
Cadmium	Cd	1.3
Chromium	Cr	1.4
Magnesium	Mg	0.8
Lead	Pb	1.5
Sulphur	S	0.7
Tin	Sn	0.8
Tellurium	Te	0.8
Zinc	Zn	1
Zirconium	Zr	0.3
Other elements*, each		0.3

---

\* Other elements are, for example, Aluminum (Al), Beryllium (Be), Cobalt (Co), Iron (Fe), Manganese (Mn), Nickel (Ni), and Silicon (Si).

b) Copper alloys:

Metallic substances other than unrefined copper in which copper predominates by weight over each of the other elements, provided that:

- i) The content by weight of at least one of the other elements is greater than the limit specified in the foregoing table; or
- ii) the total content by weight of such other elements exceeds 2.5%.

c) Master alloys:

Alloys containing with other elements more than 10% by weight of copper, not usefully malleable and commonly used as an additive in the manufacture of other alloys or as de-oxidants, de-sulphurizing agents or for similar uses in the metallurgy of non-ferrous metals. However, copper phosphide (phosphor

copper) containing more than 15% by weight of phosphorus falls in heading 28.48.

**d) Bars and rods:**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products, which have a rectangular (including “modified rectangular”) cross-section, exceeds one-tenth of the width.

The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or descaling), provided that they have not thereby assumed the character of articles or products of other headings.

Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, drawing stock (wire-rod) or tubes, are however to be taken to be unwrought copper of heading 74.03.

**e) Profiles:**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes.

The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

**f) Wire:**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles” of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products, which have a rectangular (including “modified rectangular”) cross-section, exceeds one-tenth of the width.

In the case of heading 74.14, however, the term “wire” applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

**g) Plates, sheets, strip and foil:**

Flat-surfaced products (other than the unwrought products of heading 74.03), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including “modified rectangles” of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- Of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Headings 74.09 and 74.10 apply, inter alia, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

**h) Tubes and pipes:**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be taken to be tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

**Subheading Notes:**

**1. In this Chapter the following expressions have the meanings hereby assigned to them:**

**a) Copper-zinc base alloys (brasses):**

Alloys of copper and zinc, with or without other elements. When other elements are present:

- Zinc predominates by weight over each of such other elements;
- Any nickel content by weight is less than 5% (see copper-nickel-zinc base alloys (nickel-silvers) or (German silver)); and
- Any tin content by weight is less than 3% (see copper-tin base alloys (bronzes)).

**b) Copper-tin base alloys (bronzes):**

Alloys of copper and tin, with or without other elements. When other elements are present, tin predominates by weight over each of such other elements, except that when the tin content is 3% or more the zinc content by weight may exceed that of tin but must be less than 10%.

**c) Copper-nickel-zinc base alloys (nickel silvers):**

Alloys of copper, nickel and zinc, with or without other elements. The nickel content is 5% or more by weight (see copper-zinc base alloys (brasses)).

**d) Copper-nickel base alloys:**

Alloys of copper and nickel, with or without other elements but in any case containing by weight not more than 1% of zinc. When other elements are present, nickel predominates by weight over each of such other elements.

**Chapter 75**  
**Nickel and Articles Thereof**

**Notes:**

1. In this chapter the following expressions have the meanings hereby assigned to them:

**a) Bars and rods:**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products, which have a rectangular (including “modified rectangular”) cross-section, exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or descaling), provided that they have not thereby assumed the character of articles or products of other headings.

**b) Profiles:**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

**c) Wire:**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products, which have a rectangular (including “modified rectangular”) cross-section, exceeds one-tenth of the width.

**d) Plates, sheets, strip and foil:**

Flat-surfaced products (other than the unwrought products of heading 75.02), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including “modified rectangles” of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- Of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- Of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading 75.06 applies, inter alia, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such

products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

**e) Tubes and pipes:**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular, or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

**Subheading Notes:**

1. In this chapter the following expressions have the meanings hereby assigned to them:

**a) Nickel, not alloyed:**

Metal containing by weight at least 99% of nickel plus cobalt, provided that:

- i) The cobalt content by weight does not exceed 1.5%, and
- ii) The content by weight of any other element does not exceed the limit specified in the following table:

**TABLE - Other elements**

Element		Limiting content % by weight
Iron	Fe	0.5
Oxygen	O	0.4
Other elements, each		0.3

**b) Nickel alloys:**

Metallic substances in which nickel predominates by weight over each of the other elements provided that:

- i) The content by weight of cobalt exceeds 1.5%,
- ii) The content by weight of at least one of the other elements is greater than the limit specified in the foregoing table, or
- iii) The total content by weight of elements other than nickel plus cobalt exceeds 1%.

2. Notwithstanding the provisions of chapter note 1 c), for the purposes of subheading 75 08 10 the term "wire" applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

**TABLE - Other elements**

Element		Limiting content % by weight

- i) The content by weight of at least one of the other elements or of iron plus silicon taken together is greater than the limit specified in the foregoing table; or
- ii) The total content by weight of such other elements exceeds 1%.

**2. Notwithstanding the provisions of chapter note 1 c), for the purposes of subheading 7616 91 the term “wire” applies only to products, whether or not in coils, of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.**

**Chapter 78**  
**Lead and Articles Thereof**

**NOTE:**

1. In this chapter the following expressions have the meanings hereby assigned to them:

**a) Bars and rods:**

Rolled, extruded, drawn or forged products, not in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products, which have a rectangular (including “modified rectangular”) cross-section, exceeds one-tenth of the width. The expression also covers cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or descaling), provided that they have not thereby assumed the character of articles or products of other headings.

**b) Profiles:**

Rolled, extruded, drawn, forged or formed products, coiled or not, of a uniform cross-section along their whole length, which do not conform to any of the definitions of bars, rods, wire, plates, sheets, strip, foil, tubes or pipes. The expression also covers cast or sintered products, of the same forms, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or products of other headings.

**c) Wire:**

Rolled, extruded or drawn products, in coils, which have a uniform solid cross-section along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons (including “flattened circles” and “modified rectangles”, of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel). Products with a rectangular (including square), triangular or polygonal cross-section may have corners rounded along their whole length. The thickness of such products, which have a rectangular (including “modified rectangular”) cross-section, exceeds one-tenth of the width.

**d) Plates, sheets, strip and foil:**

Flat-surfaced products (other than the unwrought products of heading 7801), coiled or not, of solid rectangular (other than square) cross-section with or without rounded corners (including “modified rectangles” of which two opposite sides are convex arcs, the other two sides being straight, of equal length and parallel) of a uniform thickness, which are:

- Of rectangular (including square) shape with a thickness not exceeding one-tenth of the width,
- of a shape other than rectangular or square, of any size, provided that they do not assume the character of articles or products of other headings.

Heading 78.04 applies, inter alia, to plates, sheets, strip and foil with patterns (for example, grooves, ribs, chequers, tears, buttons, lozenges) and to such products which have been perforated, corrugated, polished or coated, provided that they do not thereby assume the character of articles or products of other headings.

**e) Tubes and pipes:**

Hollow products, coiled or not, which have a uniform cross-section with only one enclosed void along their whole length in the shape of circles, ovals, rectangles (including squares), equilateral triangles or regular convex polygons, and which have a uniform wall thickness. Products with a rectangular (including square), equilateral triangular or regular convex polygonal cross-section, which may have corners rounded along their whole length, are also to be considered as tubes and pipes provided the inner and outer cross-sections are concentric and have the same form and orientation. Tubes and pipes of the foregoing cross-sections may be polished, coated, bent, threaded, drilled, waisted, expanded, cone-shaped or fitted with flanges, collars or rings.

**SUBHEADING NOTE**

1. In this Chapter the expression “refined lead” means: metal containing by weight at least 99.9% of lead, provided that the content by weight of any other element does not exceed the limit specified in the following table:

- b) Office machinery of heading 84.72.

Heading 84.24 does not cover:

Ink-jet printing machines (heading 84.43 or 84.71).

- 3. A machine-tool for working any material which answers to a description in heading 84.56 and at the same time to a description in heading 84.57, 84.58, 84.59, 84.60, 84.61, 84.64 or 84.65 is to be classified in heading 84.56.
- 4. Heading 84.57 applies only to machine-tools for working metal, other than lathes (including turning centers), which can carry out different types of machining operations either:
  - a) By automatic tool change from a magazine or the like in conformity with a machining program (machining centers),
  - b) By automatic use, simultaneously or sequentially, of different unit heads working on a fixed position work-piece (unit construction machines, single station), or
  - c) By the automatic transfer of the work-piece to different unit heads (multi-station transfer machines).
- 5. A) For the purposes of heading 84.71, the expression “automatic data processing machines” means:
  - 1) Digital machines, capable of:
    - (a) Storing the processing program or programs and at least the data immediately necessary for the execution of the program;
    - (b) Being freely programmed in accordance with the requirements of the user;
    - (c) Performing arithmetical computations specified by the user; and
    - (d) Executing, without human intervention, a processing program which requires them to modify their execution, by logical decision during the processing run;
  - 2) Analogue machines capable of simulating mathematical models and comprising at least: analogue elements, control elements and programming elements;
  - 3) Hybrid machines consisting of either a digital machine with analogue elements or an analogue machine with digital elements.
- B) Automatic data processing machines may be in the form of systems consisting of a variable number of separate units. Subject to paragraph E below, a unit is to be regarded as being a part of a complete system if it meets all of the following conditions:
  - 1) It is of a kind solely or principally used in an automatic data processing system;
  - 2) It is connectable to the central processing unit either directly or through one or more other units; and
  - 3) It is able to accept or deliver data in a form (codes or signals) which can be used by the system.

- C) Separately presented units of an automatic data processing machine are to be classified in heading 84.71.
  - D) Printers, keyboards, X-Y co-ordinate input devices and disk storage units which satisfy the conditions of paragraphs B 2) and B 3) above, are in all cases to be classified as units of heading 84.71.
  - E) Machines performing a specific function other than data processing and incorporating or working in conjunction with an automatic data processing machine are to be classified in the headings appropriate to their respective functions or, failing that, in residual headings.
- 6. Heading 84.82 applies, inter alia, to polished steel balls, the maximum and minimum diameters of which do not differ from the nominal diameter by more than 1% or by more than 0.05 mm, whichever is less. Other steel balls are to be classified in heading 73.26.
  - 7. A machine which is used for more than one purpose is, for the purposes of classification, to be treated as if its principal purpose were its sole purpose. Subject to note 2 to this chapter and note 3 to section XVI, a machine the principal purpose of which is not described in any heading or for which no one purpose is the principal purpose is, unless the context otherwise requires, to be classified in heading 84.79.

Heading 84.79 also covers machines for making rope or cable (for example, stranding, twisting or cabling machines) from metal wire, textile yarn or any other material or from a combination of such materials.

- 8. For the purposes of heading 84.70, the term “pocket-size” applies only to machines the dimensions of which do not exceed 170 mm x 100 mm x 45 mm.

#### **SUBHEADING NOTES:**

- 1. For the purposes of subheading 84 71 49, the term “systems” means automatic data processing machines whose units satisfy the conditions laid down in note 5 B to chapter 84 and which comprise at least a central processing unit, one input unit (for example, a keyboard or a scanner), and one output unit (for example, a visual display unit or a printer).
- 2. Subheading 84 82 40 applies only to bearings with cylindrical rollers of a uniform diameter not exceeding 5 mm and having a length which is at least three times the diameter. The ends of the rollers may be rounded.

## CHAPTER 85

### ELECTRICAL MACHINERY & EQUIPMENT & PARTS THEREOF; SOUND RECORDERS & REPRODUCERS, TELEVISION IMAGE & SOUND RECORDERS & REPRODUCERS, AND PARTS & ACCESSORIES OF SUCH ARTICLES

#### NOTES:

1. This Chapter does not cover:

- a) Electrically warmed blankets, bed pads, foot-muffs or the like; electrically warmed clothing, footwear or ear pads and other electrically warmed articles worn on or about the person;
- b) articles of glass of heading 70.11; or
- c) electrically heated furniture of Chapter 94.

2. Headings 85.01 to 85.04 do not apply to goods described in heading 85.11, 85.12, 85.40, 85.41 or 85.42.

However, metal tank mercury arc rectifiers remain classified in heading 85.04.

3. Heading 85.09 covers only the following electro-mechanical machines of the kind commonly used for domestic purposes:

- a) Vacuum cleaners, including dry and wet vacuum cleaners, floor polishers, food grinders and mixers, and fruit or vegetable juice extractors, of any weight;
- b) Other machines provided the weight of such machines does not exceed 20 kg. The heading does not, however, apply to fans or ventilating or recycling hoods incorporating a fan, whether or not fitted with filters (heading 84.14), centrifugal clothes-driers (heading 84.21), dish washing machines (heading 84.22), household washing machines (heading 84.50), roller or other ironing machines (heading 84.20 or 84.51), sewing machines (heading 8452), electric scissors (heading 84.67) or to electro-thermo appliances (heading 85.16).

4. For the purposes of heading 85.34 “printed circuits” are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the “film circuit” technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).

The expression “printed circuits” does not cover circuits combined with elements other than those obtained during the printing process, nor does it cover individual, discrete resistors, capacitors or inductances. Printed circuits may, however, be fitted with non-printed connecting elements.

Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading 85.42.

5. For the purposes of headings 85.41 and 8542:

- a) “Diodes, transistors and similar semiconductor devices” are semiconductor devices the operation of which depends on variations in resistance on the application of an electric field;
- b) “Electronic integrated circuits and micro-assemblies” are:
  - 1) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semiconductor material (doped silicon, for example) and are inseparably associated;
  - 2) Hybrid integrated circuits in which passive elements (resistors, capacitors, interconnections, etc.), obtained by thin- or thick-film technology, and

active elements (diodes, transistors, monolithic integrated circuits, etc.), obtained by semiconductor technology, are combined to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include discrete components dealing with intermittent signals;

- 3) Micro-assemblies of the molded module, micro-module or similar types, consisting of discrete, active or both active and passive, components which are combined and interconnected.

For the classification of the articles defined in this note, headings 85.41 and 85.42 shall take precedence over any other heading in the customs tariffs table which might cover them by reference to, in particular, their function.

6. Records, tapes and other media of heading 85.23 or 85.24 remain classified in those headings when presented with the apparatus for which they are intended.

This note does not apply to such media when they are presented with articles other than the apparatus for which they are intended.

7. For the purposes of heading 85.48, "spent primary cells, spent primary batteries and spent electric accumulators" are those which are neither usable as such because of breakage, cutting-up, wear or other reasons, nor capable of being recharged.

#### **SUBHEADING NOTES:**

1. Subheadings 85 19 92 and 85 27 12 cover only cassette-players with built-in amplifier, without built-in loudspeaker, capable of operating without an external source of electric power and the dimensions of which do not exceed 170 mm x 100 mm x 45 mm.
2. For the purposes of subheading 8542 10, the term "smart cards" means cards which have embedded in them an electronic integrated circuit (microprocessor) of any type in the form of a chip and which may or may not have a magnetic stripe.

**CHAPTER 91**  
**CLOCKS AND WATCHES AND PARTS THEREOF**

**NOTES:**

1. This chapter does not cover:
  - a) Clock or watch glasses or weights (classified according to their constituent material);
  - b) Watch chains (heading 71.13 or 71.17, as the case may be);
  - c) Parts of general use defined in note 2 to section XV, of base metal (section XV), or similar goods of plastics (chapter 39) or of precious metal or metal clad with precious metal (generally heading 71.15); clock or watch springs are, however, to be classified as clock or watch parts (heading 91.14);
  - d) Bearing balls (heading 73.26 or 84.82, as the case may be);
  - e) Articles of heading 84.12 constructed to work without an escapement;
  - f) Ball bearings (heading 84.82); or
  - g) Articles of chapter 85, not yet assembled together or with other components into watch or clock movements or into articles suitable for use solely or principally as parts of such movements (chapter 85).
2. Heading 91.01 covers only watches with case wholly of precious metal or of metal clad with precious metal, or of the same materials combined with natural or cultured pearls, or precious or semi-precious stones (natural, synthetic or reconstructed) of headings 71.01 to 71.04. Watches with case of base metal inlaid with precious metal fall in heading 91.02.
3. For the purposes of this chapter, the expression "watch movements" means devices regulated by a balance-wheel and hairspring, quartz crystal or any other system capable of determining intervals of time, with a display or a system to which a mechanical display can be incorporated. Such watch movements shall not exceed 12 mm in thickness and 50 mm in width, length or diameter.
4. Except as provided in note 1, movements and other parts suitable for use both in clocks or watches and in other articles (for example, precision instruments) are to be classified in this chapter.
